

George Ignatius

DEVOPS ENGINEER

+91 9597763637 · georgeignatius6@gmail.com · george-ignatius.github.io/portfolio · Tuticorin, Tamil Nadu, India

PROFILE

DevOps Engineer with 4+ years of experience across AWS and GCP, specializing in Kubernetes, CI/CD pipelines, and infrastructure automation. Proven expertise managing production-grade Kubernetes clusters, performing cluster upgrades, implementing secure cloud architectures, and optimizing deployment workflows. Hands-on with Docker, Terraform, and scripting (Bash/Python) to improve system reliability, security, and operational efficiency, backed by a disciplined approach to security scanning and disaster recovery readiness.

TECHNICAL SKILLS

Cloud Platforms	AWS, Google Cloud Platform (GCP)
AWS Services	EC2, ELB, IAM, VPC, SNS, SES, Lambda, CloudWatch, EKS, EventBridge, Redshift Serverless, ECR, S3
GCP Services	Compute Engine, VPC, Cloud Run, IAM, GKE, GCS, GCR, Pub/Sub, OpenTelemetry
Containerization	Docker, Kubernetes (EKS, GKE)
CI/CD Tools	Jenkins, GitHub Actions, GitLab CI/CD
Infra as Code	Terraform, Ansible
Monitoring & Logging	Prometheus, Grafana, ELK Stack, Datadog, New Relic, CloudWatch, OpenTelemetry
Security & Compliance	Weekly Docker image vulnerability scanning, Penetration testing, Monthly DR & BCP drills
Scripting	Bash, Python
Web Servers	Nginx, Apache Tomcat, WordPress
Databases	Elasticsearch, MySQL, AWS Redshift Serverless
Version Control	Git, GitHub, GitLab
Operating Systems	Linux (Ubuntu, RedHat, CentOS, Amazon Linux), Windows Server

PROFESSIONAL EXPERIENCE

DevOps EngineerFeb 2022 – Present

Profit Apps India Pvt Ltd · Madurai

- Managed and optimized cloud infrastructure across AWS and GCP, ensuring high availability and cost efficiency
- Performed Kubernetes cluster version upgrades (EKS & GKE) with minimal downtime, ensuring compatibility and stability
- Executed GKE CA certificate upgrades, maintaining cluster security and avoiding service disruptions
- Built and maintained CI/CD pipelines using Jenkins and GitHub Actions for automated deployments
- Deployed and managed containerized applications using Docker and Kubernetes (GKE & EKS)
- Performed weekly Docker image vulnerability scans and conducted penetration testing to strengthen application and infrastructure security posture

- Designed centralized logging architecture using ELK Stack (Elasticsearch, Fluentd, Kibana)
- Implemented monitoring and alerting solutions using Prometheus, Grafana, Datadog, New Relic, and OpenTelemetry
- Automated operational workflows using Bash and Python scripts, reducing manual effort
- Configured AWS Lambda, EventBridge, and GCP Cloud Run/Pub/Sub for serverless and event-driven automation
- Designed and implemented AWS Redshift Serverless setup for scalable and cost-efficient data analytics
- Conducted monthly Disaster Recovery (DR) and Business Continuity Planning (BCP) drills across AWS and GCP environments to validate infrastructure resilience and recovery readiness
- Implemented backup and recovery strategies for Git, Jenkins, Docker images, and configurations
- Collaborated with development teams to troubleshoot issues and improve application performance

KEY ACHIEVEMENTS

- Successfully upgraded EKS and GKE clusters with zero/minimal downtime in production environments
- Executed GKE CA certificate rotation, ensuring compliance with security standards
- Strengthened security posture by integrating weekly container image vulnerability scanning and regular penetration testing into operational workflows
- Established and led monthly DR/BCP drills, improving recovery readiness and reducing potential downtime impact across production environments
- Reduced deployment time by 10+ minutes using multi-stage Docker builds
- Improved monitoring by implementing CloudWatch alarms and proactive notification systems
- Enabled EKS Container Insights, improving cluster visibility and performance monitoring
- Implemented AWS Redshift Serverless, optimizing analytics workload scalability and cost efficiency
- Adopted GCP Pub/Sub for event-driven automation, improving service decoupling and system responsiveness
- Integrated Google Chat webhook alerts for real-time incident notifications
- Configured Atlassian Statuspage for application uptime monitoring and incident communication

PROJECTS

Kubernetes Cluster Management & Upgrades

- Performed EKS and GKE version upgrades and ensured workload compatibility
- Managed cluster lifecycle operations including certificate rotations and maintenance

Cloud Monitoring & Alerting System

- Implemented Prometheus and Grafana dashboards for real-time monitoring
- Configured CloudWatch alerts and Google Chat webhook notifications for incident response

Centralized Log Management System

- Designed and implemented ELK Stack for centralized logging and analysis
- Improved debugging and troubleshooting efficiency across microservices and applications

Secure CI/CD Pipeline Implementation

- Integrated weekly Docker image vulnerability scanning and penetration testing into CI/CD pipelines
- Improved security compliance and reduced risk in production deployments

Disaster Recovery & Business Continuity Planning

- Conducted monthly DR and BCP drills across AWS and GCP to validate backup integrity and recovery procedures
- Documented recovery runbooks and reduced estimated recovery time for critical workloads

EDUCATION

Bachelor of Science — Computer Science2016 – 2019
V.O. Chidambaram College · Manonmaniam Sundaranar University
